

What is Open-R?

Open-R is an enhanced registers creator. It enables fast and simple creation of well-presented commercial registers within Microsoft Word®, incorporating colour text, logos, pictures and other documents.

It facilitates the fast and efficient creation of a portfolio of client policies in Microsoft® Word for presentation to the client.

With Open-R more detail can be included in presentations with less effort; all helping to project a better image to customers.

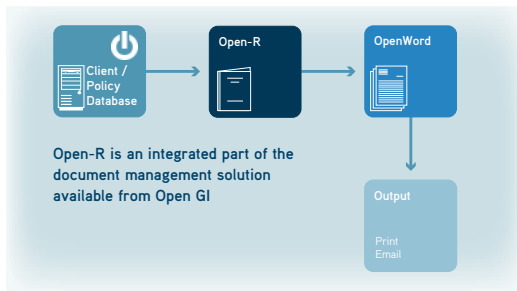

BENEFITS

- 1 Drastically reduce administration time
- 2 Easily create & store bespoke templates or client specific documents
- 3 Seamless integration with any Microsoft Office® generated documents
- 4 Simple step by step user controls
- 5 Insert Word® documents, spreadsheets or images at the touch of a button
- 6 Preview, edit and amend documents as often as necessary
- 7 Simple and intuitive to use with drag and drop functionality
- 8 Include or exclude Documents & whole policies using check boxes
- 9 Adaptable for Insurer, Client, Broker and Third Party presentations

How it all works?

Open-R presents documents in a Windows 'tree' style structure, with each presentation organised as the user wishes. Previously configured preamble, headers and footers can be integrated into appropriate templates, but can be easily moved or removed if required.

The intuitive interface enables all staff to be effective at presentation creation quickly and with minimal training.

What can it do for me?

Open-R provides full control of register creation in an easy to understand interface. The register wizard provides clear directions on how to easily design professional registers using check boxes and single key entry.

Open-R drastically reduces the time taken to produce registers and provides a simple and effective way of creating templates, as well as storing, saving and editing documents.

Transform your business critical documents effortlessly with Open-R.

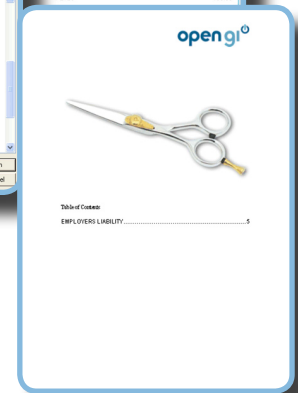

Open-R register screen

Register elements to be included can be selected or deselected using tick boxes. The command buttons on the right are clear and their actions are easy to understand. Open-R allows you to insert anything from spreadsheets, graphs, e-mails and images.

Open-R register preview screen

Documents are viewed in Word. Users can choose to save, store, amend or create templates using the Open-R register wizard.
